

Logan Selley

Geospatial Data Engineer | Spatial Analysis & Pipeline Development

Seattle | (509)-979-8547 | logan@selleytech.com | <https://www.linkedin.com/in/logan-selley/>

WORK EXPERIENCE

RMSI for Apple

Seattle, WA

Technical Specialist (SQL)

May 2022 - Present

- Designed multi-stage duplicate cluster detection using Jaro-Winkler and Levenshtein fuzzy matching, spatial clustering, and Union-Find connected components to identify duplicate clusters across vendor datasets
- Co-lead the end-to-end Territories Build pipeline managing team of 10, overseeing territory data lifecycle from vendor handoff through production release
- Developed a Python CLI automation suite for Snowflake ETL, pre-ingest validation, and standardization
- Mentored the team of 10 through an automation rollout: wrote the SOPs, trained analysts on the new workflow before production cutover, and held delivery with no missed handoffs
- Led dual infrastructure migrations: Postgres to Snowflake and Hadoop HDFS to S3, rewriting spatial queries
- Traced recurring geometry and naming defects across vendor data to their source through data quality gap analysis
- Served as primary technical liaison between vendor teams and Apple stakeholders, translating analytical findings into actionable requirements and quality standards

GIS Technician

June 2021 - May 2022

- Designed spatial query and deduplication workflows combining buffer analysis, spatial joins, and fuzzy string matching (Levenshtein) to automate boundary alignment and duplicate detection across regional datasets
- Led the global country boundary refresh, defining the approach for disputed territories with stakeholders

PROJECTS

King County Metro Transit Streaming

Sep 2026 - Present

Python, Kafka (Redpanda), PyFlink, PostGIS, dbt Core, Airflow, MinIO S3, Terraform

github.com/Logan-Selley/King-County-Metro-Transit-Streaming

- Archived every raw payload before enrichment, so the whole pipeline replays from bytes it has already seen.
- Built the stream in stateful Flink over three live feeds: 8.61M vehicle positions, 3,694 bunching alerts and 23.3M arrival predictions checked in one study week, feed live 97.4% of minutes.
- Found Metro's arrival estimates pessimistic: median error 44 s under two minutes out, 202 s at 45-60.

WA Parcel Reconciliation Pipeline

Aug 2026 - Present

Python, PostgreSQL/PostGIS, dbt Core, Airflow, Docker, DuckDB, GitHub Actions

github.com/Logan-Selley/Wa_Parcel_Pipeline

- Designed the PostGIS conformance schema for 1.5M parcel records across four counties in dbt layers.
- Reconciled against the state's own normalized layer: 96 to 99% agreement by county, differences classified.
- Orchestrated it as a daily Airflow DAG in sibling containers, with 41 structural dbt tests.

EDUCATION

University of Washington

Seattle, WA

BA Geography: Data Science, minors in Informatics, Music

June 2021

TECHNICAL SKILLS

Programming: Python (Pandas, NumPy, GeoPandas, Shapely, Fiona), SQL (Snowflake, PostgreSQL)

Spatial Analysis QGIS, ArcGIS, PyQGIS | spatial joins, buffers, topology validation, geometry repair

Data Quality Fuzzy matching (Levenshtein, Jaro-Winkler), deduplication, statistical analysis

Platforms & Tools Snowflake, PostgreSQL/PostGIS, dbt Core, Apache Airflow, DuckDB, AWS S3, Hadoop HDFS, Docker, GitHub Actions CI/CD, Git, REST APIs
